EXPERIENCES

• Backend Developer

INNORIX Viet Nam

January 2025 - Present

- Contributed as a backend developer to Exacoola, a large-scale file transfer platform using **Express.js**, enabling reliable multi-GB and massive file transfers across **Windows, Linux, and macOS**, with support for multiple cloud storage platforms including **GCP, Azure, Amazon S3 and etc...**
- Implemented real-time device synchronization, command handling, and agent communication using **Socket.IO** with **Redis Pub/Sub**, enabling horizontally scalable communication across clustered backend instances deployed via **PM2 cluster mode**. Containerized and deployed backend services for the **on-premise** version on **Linux** infrastructure using **Docker Swarm** in replicated mode.
- Optimized complex **MySQL** queries using **Common Table Expressions (CTEs)** and indexing strategies, reducing execution time by approximately **90%** from **60s to 0.5s**. Improved database reliability under high-concurrency workloads by managing transactions, tracing deadlocks, and optimizing **Prisma** connection pooling for a **multi-tenant** architecture.
- Designed asynchronous processing workflows using **RabbitMQ** to offload background tasks such as notifications and email delivery, while implementing command queues for agent communication and file transfer workflows.
- Separated monitoring functionality into an independent microservice and implemented inter-service communication using **gRPC**, improving service modularity, scalability, and maintainability.
- Designed and optimized large-scale object storage transfer workflows using **chunked uploads/download, Node.js streaming pipelines**, and **pre-signed URLs** for secure file upload/download, reducing memory usage while improving transfer performance and cloud storage cost efficiency through **S3 lifecycle policies** and storage class transitions.

• Frontend Developer Intern

FPT SOFTWARE

September 2023 - December 2023

- Developed a team project as a UI/Frontend developer using **React.js**.
- Collaborated in a team of five following **Agile** methodology.
- Contributed to database design and coordinated with the backend team to configure APIs.

EDUCATION

• FPT University

Bachelor of Software Engineering

Ho Chi Minh City, Viet Nam

December 2020 – March 2025

- Received the **Philosophy Talk 12 Certificate** for delivering a presentation on job hopping and career transitions, June 2024.

SKILLS

- **Programming Languages and Frameworks:** NestJS, Express.js, React.js, JavaScript, TypeScript, Golang.
- **Databases and Caches:** PostgreSQL, MySQL, MongoDB, Redis.
- **DevOps Infrastructure:** Docker, Kubernetes.
- **Cloud Platforms:** AWS, GCP.
- **Other Technologies:** GraphQL, Firebase.
